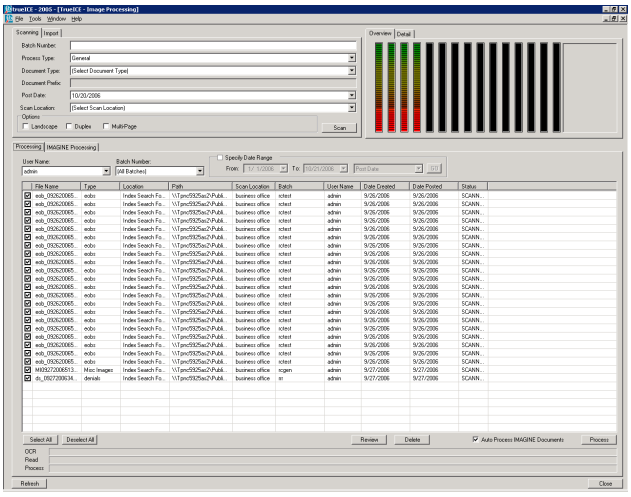
Fact Sheet

trueICE Practice Imaging Tools

trueICE is the document imaging component of the IMAGINEradiology™ practice management suite.

Powerful Document Imaging Components for a Truly Paperless Environment

IMAGINE incorporates powerful document imaging components for a truly paperless environment and keyless data entry. Features include Optical Character Recognition, comprehensive annotations (text, highlights, sticky notes, stamps, and more), and specialized image display and processing. Other features include performance and memory optimizations for document images, clean-up including hole-punch, line removal and high speed scanning with *Fast* TWAIN.



IMAGINE's OCR engine, based upon time-tested industry standards, includes preset confidence and accuracy levels, artificial intelligence, and built-in and user-defined lexicons for increasing the type of text recognized within a particular zone.

Specialized display options that increase the quality and readability of black and white images on the screen are included in the IMAGINE trueICE module.

IMAGINE provides a "zoomed view" feature that is attached to a window handle. The Zoom View gives you the ability to "zoom in" on the image loaded into the window.

Faster loading and viewing speeds and reduced requirements for work stations are a result of IMAGINE's Document Imaging modules capacity to keep images compressed in memory.

- Eliminates Your Paper Chase
- Increases Productivity with Instant Image Retrieval
- Streamlines Disaster Recovery Efforts
- Provides User Flexibility
- Utilizes Smart Imaging Technology
